This weight variable enfolds the 1997 and 1999 Immigrant samples. Values are nonzero for sample members associated with either a Core or Immigrant 97-99 family that is response in 2017. No weight variable exists for analysis of the Core or the 97/99 Immigrant samples separately.

The range of possible values for this variable is .0.202-167.068.

Users should note that the Immigrant 2017 sample (ER30001=4001-4851) has values of zeros for this variable as no historical data is available for these cases and, therefore, they currently should not be included in any longitudinal analysis.

TA171975 "MENTAL HEALTH: NON-SPEC PSYCH DISTRESS"

The K-6 Non-Specific Psychological Distress Scale

This scale is constructed using non-missing responses to the following questions:

TA171799 H83a. How Often Felt Nervous in Past Month
 TA171800 H83b. How Often Felt Hopeless in Past Month
 TA171801 H83c. How Often Felt Restless in Past Month
 TA171802 H83d. How Often Felt Everything an Effort in Past Month
 TA171803 H83e. How Often Felt Too Sad in Past Month
 TA171804 H83f. How Often Felt Worthless in Past Month

The codes for these questions are as follows:

1 All of the time
 2 Most of the time
 3 Some of the time
 4 A little of the time
 5 None of the time

To create the scale, the items are rescored as follows:

A response of
 'All of the Time' = 4 points,
 'Most of the Time' = 3 points,
 'Some of the Time' = 2 points,
 'A Little of the Time' = 1 point, and
 'None of the Time' = 0 points.

The scores are then summed; a score of 13 or higher indicates sensitivity around the threshold for the clinically significant range of the distribution of nonspecific distress.

This variable may be based on fewer than the above six variables. Items containing "don't know" and "refused" responses are not included in the calculation of the scale.

This scale was developed by Dr. Ronald Kessler, Professor of Healthcare Policy at Harvard Medical School.

TA171978 "BODY MASS INDEX"

Body Mass Index

This variable was calculated as follows:

$BMI = [(Weight \text{ in Pounds}) / (Height \text{ in inches}) \times (Height \text{ in inches})] \times 703$

Height and weight values were taken from the following questions:

TA171787 H77. Weight--Total Pounds
 TA171789 H78. Height--Feet Component
 TA171790 H78. Height--Inches Component

Any extreme results, i.e., BMI of less than 15.0 or greater than 59.9, were recoded to 99, since in such cases the accuracy of height and/or weight values is highly doubtful.

Body mass index (BMI) is a measure of body fat based on height and weight that applies to both adult men and women. BMI categories are:

Normal weight = 18.5-24.9
 Overweight = 25.0-29.9
 Obese = BMI of 30.0 or greater

For more information, see:

These codes are based on matches to the FIPS state and county codes against the 2013 Rural-Urban Continuum Codes published by USDA downloaded from <https://www.ers.usda.gov/data-products/rural-urban-continuum-codes/.aspx>

The 2013 Rural-Urban Continuum Codes form a classification scheme that distinguishes metropolitan counties by the population size of their metro area, and nonmetropolitan counties by degree of urbanization and adjacency to a metro area. The official Office of Management and Budget (OMB) metro and nonmetro categories have been subdivided into three metro and six nonmetro categories. Each county in the U.S. is assigned one of the 9 codes. This scheme allows researchers to break county data into finer residential groups, beyond metro and nonmetro, particularly for the analysis of trends in nonmetro areas that are related to population density and metro influence. The Rural-Urban Continuum Codes were originally developed in 1974. They have been updated each decennial since (1983, 1993, 2003, 2013), and slightly revised in 1988. Note that the 2013 Rural-Urban Continuum Codes are not directly comparable with the codes prior to 2000 because of the new methodology used in developing the 2000 metropolitan areas.

ER34717 "YEAR HIGHEST EDUCATION UPDATED 19"

Year Reference Person/Spouse/Partner or OFUM education updated

As of the 2015 Wave, the education series for Reference Person/Spouse/Partner and OFUMs (aged 16 or older and in the FU last year) are parallel. Thus, we have included these education variables as part of the Individual File although most are also repeated for Reference Persons/Spouses/Partners on the 2019 Family File in the KL background section, as well.

For new Reference Persons/Spouses/Partners and eligible OFUMs, the baseline education series is asked (KL43/G88a - KL61b/G88m). For returning Reference Persons/Spouses/Partners and eligible OFUMs, the education update series (KL84a/G88dd) is asked. If the calculated level of completed education in the update series is higher than previously reported, this variable indicates the year this individual's main education series (KL43/G88a - KL61b/G88m) was updated.

Please note that the baseline education series for eligible OFUMs was first collected in 2013.

ER34752 "YEARS COMPLETED EDUCATION 19"

What is the highest grade or year of school that (you/he/she) has completed?

This variable contains values for Reference Persons/Spouses/Partners and OFUMs aged 16 years or older who were in the Family Unit in the prior year.

The values for this variable represent the actual grade of school completed; e.g., a value of 08 indicates that this individual completed the eighth grade by the time of the 2019 interview.

The values for 2019 Reference Persons/Spouses/Partners are pulled from 2019 family-level data. Beginning in the 2013 Wave, we asked for an education update for our returning Reference Persons/Spouses/Partners. If additional educational attainment was reported, we updated their education variables in the background section and reported the year of the education update on the Family file (see variables "Year Highest Education Updated", ER76761, for Spouses/Partners, and ER76906, for Reference Persons).

The values for 2019 OFUMs are derived as follows: for new Reference Persons/Spouses/Partners/eligible OFUMs: uses variables that correspond to the main education series (KL43/G88a - KL61b/G88m); for returning Reference Persons/Spouses/Partners/eligible OFUMs: uses variables that correspond to the updated education series (KL74/G88n - KL83b/G88bb). These data are parallel as of the 2015 Wave.

This variable differs from the family-level variables ER77599 (Reference Person) and ER77600 (Spouse/Partner) in the treatment of Reference Persons and Spouses/Partners who received a GED but did not attend college. The value for the family-level variable is the grade completed; for this individual-level variable, the value is 12. Similarly, for OFUMs, this variable differs from G88c1 (ER34722) in the treatment of OFUMs who received a GED (G88b1=2) but the value derived from G88c1 is less than 12 years; that is, G88c1 retains the grade completed but the value for this variable is coded as 12.

KL74/G88n. Now I would like to talk about the education (you have/[he/she] has) received. (Have you/has [he/she]) attended regular school since our last interview on (PYIWDATE)? Regular school includes high school and schooling that leads to a college or professional school degree.

The following series (ER34753-ER34787) is the educational update series for Reference Persons/Spouses/Partners and eligible OFUMs. If the calculated educational level derived from the update series is higher than previously reported, we have updated the main educational series (ER34718-ER34752) with this new information. Variable ER34717 indicates the year this series was updated for returning Reference Persons/Spouses/Partners and eligible OFUMs.
